

Why IT projects are Doomed!

How to avoid bankrupting your business through oversized, overskilled projects

Professor Eddie Obeng

What do Boo.com, the National Fingerprinting Project, Taurus and the millennium dome have in common? Easy question - easy answer vast overspends without hoped for results, but only the first three involve significant spending on IT without any real tangible result. Although you may not realise it, the odds are stacked against you if you start an information technology based project. There are a number of very sound reasons for this.....

So perhaps not all IT projects are doomed. At least not the ones who apply the clear lessons of past failures.
