## Supervoid

**Do you have the Eridanus *hole* rising in your horoscope? Some of our clients do!**

A recently discovered supervoid in the constellation of Eridanus challenges our theories about the universe. The hole has been discovered at the time when the forces of evil were making strong opposition to the redeeming powers of Jupiter in Ophiuchus. Science has triumphed again against itself, which is good because the scientists will have to regroup and reformulate their theories. Nevertheless, what about the religious drawbacks?

The Vedic legacy leaves no doubt about an existence of astronomy and astrology in the earliest days of humanity. The Bible agrees but Jehovah forbids astronomy or astrology especially to the Levites.

What about modern astrology? Nowadays there is much superstition despite and precisely because the proliferation of “astrological programs” that largely distort our true skies. In rough terms, the errors increase towards a quarter of a sky! There is no modern astrology apart from scientific astrology, since superstition has actually increased since Hipparchus.

In order to give an idea of the errors, here are a couple of examples. A woman suffered from being called “cold Capricorn”<sup>1</sup> for her whole lifetime, while she has clearly Pisces ascending at her eastern horizon. The so-called modern astrological programs are unable to determine the ascendant. Note that the error is much larger than “one sign”. A man has been told he is a “Scorpio” but his natal Sun is in Virgo. Again, the error is too large to be pardoned. Such errors are common on any “astrological” software that one is liable to come across. Therefore, astronomers have abandoned admonishing long ago. Hipparchus was the last to rebuke. The problem is that astronomers apparently followed astrology

---

<sup>1</sup> Capricornus and Scorpius are the proper spelling for the constellations.

when it came to using the zodiac. The result is that Kepler, Newton and Galileo were zodiacally illiterate. They would hardly cope with a dark hole rising in Eridanus. That is precisely our task. We want to explain Eridanus as ascendant constellation, with the super-hole inside and how it affects your horoscope in the 12 houses. Hardy any astronomer knows the 22 IAU constellations of the zodiac to perfection.

After the fall of great civilizations like Egypt, every little people assumed to know much of life, universe and everything. Scared science was debased to marketplace divination. Observation was abandoned in favor of a fixed unmoving universe. This is the state of astrology as we have found it today. Our zodiacal reformation clearly proves that science has an edge over superstition. Astrology became like a superstitious religion as soon as everybody assumed to be an astrologer. Science is fighting against superstition but people are in fact attracted by the devil, the majority pertains to the devil in our apocalyptic times. The great hole is precisely an apocalyptic omen in the year of the Antichrist 2007.
